US Citizen in Orlando Florida

Education

- B.S. in Data Science from the University of Central Florida

Work History/Projects

University of Central Florida Strategic Roadmap & Implementation Internship (Fall 2025)

Tools: PowerPoint, Lucid chart, Notion, Process Mapping

- Managed and coordinated strategic roadmap development for new software services using Jira and Microsoft Excel.
- Created process maps using Lucid Chart for high level visualization of technical workflows to software development teams.
- Communicated software development rollouts via PowerPoint to multiple University stakeholders and software developers.
- Created a governance framework to ensure software services are in compliance with federal and state statutes.

Mortgage Prediction – UCF Addition Financial Competition (1st Place, 2024–2025)

Tools: Python, SQL, PowerPoint

- Managed end-to-end project lifecycle from data acquisition to final stakeholder presentation.
- Processed and analyzed 1 million + records using python and PostgreSQL
- Coordinated workload across project phases including data processing, feature engineering, modeling, and validation.
- Communicated results to Addition Financial stakeholders using PowerPoint to improve customer retention.

Semantic Graph Database for Florida Solar Energy Company (Summer 2025)

Tools: Python, GraphDB, PostgreSQL

- Managed design and implementation of a knowledge graph system integrating multiple different data sources.
- Coordinated requirements gathering with research stakeholders to define scope and success criteria.
- Oversaw data pipeline development and ensured alignment with research objectives and timeline milestones.
- Reduced manual data retrieval time by 60% through structured system deployment.
- Documented architecture, workflows, and implementation plans to ensure maintainability and scalability.

Personality Classification using Deep Learning (Spring 2025)

Tools: Python, and PowerPoint

- Led project planning, model development, and validation phases within defined academic timeline.
- Established measurable performance benchmarks and monitored model evaluation metrics.
- Managed data preprocessing workflow and tracked progress through iterative testing cycles.
- Communicated findings via structured visual reports and technical documentation.
